

A square gift box with a gold and white striped pattern is floating in the middle of a blue ocean. The box is wrapped with a gold ribbon that forms a large, decorative bow on top. The water around the box is slightly white with foam, suggesting it's moving or has just been placed there. In the background, there are dark, rugged mountains under a clear sky. The overall scene is serene and celebratory.

Thank You!

Laura Holloway • 6d

I'm not sure how aspirational it is but I am going to work on being kind to myself and making time for me. I am great at helping others but always find an excuse not to help myself. They say you can't pour from an empty cup so I am going to give myself 10 minutes a day of mindfulness meditation. No excuses. I will make 10 minutes a day for 30 days. This will help me digest the day, breathe and be ready for whatever else pops up - coz life is good at surprises. If I am grounded I am a better support to those around me. It will help me keep focus and review my values and keep my identity. It will help me practice gratitude. I start today!

The habit I want to uninstall is laziness with regards to consistent/manageable exercise. I found yesterday's session really helpful in making me see this as achievable and my brain can be re-wired to achieve this change.

Just need to get a handle on consistency! 🧠💪

Laura Holloway • 6d

@Imran Khan some say the hardest part is putting your trainers on, getting started. You usually feel great once it's done. Good luck on your 30 day uninstall. Manifest it, make it happen. Great choice. There are some fab 30 day challenges that may help you stay on track - 30 day sit up challenge or 30 day squat challenge or even skipping all can fit into any type of day and quick and easy to do. If you've forgotten and about to go to bed, no equipment needed jump up and get it done!

Abuzaffar Sonde • 6d

The quality I'm striving to master is emotional balance — the ability to stay calm, grounded, and compassionate, even when life tests your patience. Through my journey in life I've come to realise that true strength isn't about control, it's about awareness, being able to pause, reflect, and respond from a place of understanding rather than reaction. Letting go of self-doubt and mastering emotional balance isn't just personal growth; it's the foundation for guiding others toward their own transformation. Every challenge becomes a lesson, and every lesson becomes an opportunity to grow — both as a person and as a coach.

A quality I really want to master is trust — in myself, in others, and in the process of life. I've always been someone who likes to have a plan and stay in control, but I've learned that real growth often happens when I loosen my grip a little and allow things to unfold naturally. Trust aligns deeply with my values of authenticity and faith — it reminds me to stay grounded in who I am, even when the outcome isn't clear.

A quality I'd like to let go of is perfectionism. I've realized it sometimes keeps me from enjoying the moment or taking bold steps forward because I'm too focused on getting everything "just right." That doesn't reflect who I truly am or the kind of coach I want to be. I value progress over perfection, and I want my life — and my work — to reflect that balance of ambition and grace.

Strength, compassion, and gratitude are values I incorporate into my everyday existence. When certain relatives doesn't think well of me, it kinds of demotivates me. Even though I am a strong-willed individual who doesn't give up easily, I have to acknowledge that not everything is within our control.

Abstract

In Western societies, school pedagogies tend to be biased in favour of talk and emphasise the links between talking, thinking and learning. Thus talk is often privileged over silence as the basis for learning activities in classrooms, sustained by theories of learning which afford priority to talk. Such cultural bias towards talk means that by contrast, silence can be perceived negatively and construed as a form of ‘non-participation’. Through a systematic literature review of journal articles relating to silence as a pedagogical approach published between 2000 and 2021, this article reappraises the role and value of silence in school education. Some of the apparent paradoxes of silence as a pedagogical approach, different types and uses of silence in the classroom, cultural dimensions of silence and the relationships between silence, power and critical

The pedagogical importance of silence as a participatory approach to learning emerges as a significant point for educators and the paper offers some suggestions for potential applications in classroom practice.

Silence as a manner within the doctor's epistemic posture during the diagnostic process: A case study in a French hospital

Antoine Glauzy¹

Affiliations + expand

PMID: 40339397 DOI: 10.1016/j.socscimed.2025.118153

Abstract

The notion of silence often emerges between the lines in studies on diagnosis and the disclosure of bad news to patients. However, silence rarely takes center stage in such studies, risking an underestimation of its significance. This study, conducted through observations and semi-structured interviews in a hospital specializing in liver and pancreatic diseases, centers its analysis on the role of silence. It explores how institutional norms and constraints shape doctors' use of silence during consultations and diagnostic processes. The findings reveal that silence, understood as withholding information or concealing the name of a disease, serves distinct functions: in the pre-diagnostic phase, it helps prepare patients for the possibility of illness while respecting institutional expectations;

This research argues that silence is a central attitude of the doctor's epistemic posture, mediating the complex interplay between institutional demands and patient care.

The background of the image is a deep blue underwater scene. Numerous small, light-colored bubbles are scattered throughout, particularly concentrated in the upper half. Sunlight rays or light beams penetrate from the surface, creating a shimmering effect and illuminating the water. The overall texture is slightly grainy, typical of a video frame.

2) GOOD CHARACTER

The happiness effect

PMCID: PMC3066527 PMID: [21479086](#)

Abstract

Emerging from the worst economic crisis in decades, more governments than ever are measuring health and happiness as well as gross domestic product. But how will the study of well-being shape new policies? Alice Ghent reports.

Studying disease as a way to predict risk factors for ill health is one of the pillars of public health research. But in 1938, Dr Arlie Bock, the director of the then Department of Hygiene at Harvard University, wondered whether studying sick people was only half of the story. He decided to turn this research on its head by studying young healthy men. "All admit that the sick need care, but very few apparently have thought it necessary to make a systematic inquiry as to how people keep well and do well," he said in a 1938 press release.

The Study of Adult Development, which Bock set up, is still going and claims to be the world's longest-running longitudinal study of adult life. Researchers have been studying two groups of men in the United States of America (USA) with one primary aim – to discover what it takes to live well. One, known as the Grant study, has been following a cohort of 268

Harvard graduates for seven decades, 125 of these men are still alive and 114 are still actively participating in the study, according to Harvard Medical School's web site. The other concentrated on 456 men who grew up in inner-city Boston. Of this group, 226 are alive and 161 are still active in the study, which requires the men to answer questionnaires every two years and to be interviewed personally every 15 years.

After following the two groups from adolescence to retirement, researchers have identified several factors that predict healthy ageing. Limiting alcohol, getting enough exercise and maintaining a healthy weight are important, but so is a good marriage, education and “mature coping skills” such as stoicism and altruism. However, for George Vaillant, the Harvard study’s director, the most powerful influence on a rewarding life is the simplest.

Now writing a history of the Grant study, Vaillant says, “Warm, intimate relationships are the most important prologue to a good life.” He also refers to the transformative power of love. Referring to the experiences of two of the Grant study men who found warm relationships later in life, he says, “It is never too late to be reborn through love.”

But how do governments objectively measure happiness or love, which are subjective states, and, if they succeed, what should they do with their findings? Vaillant points to the strength of evidence provided by a longitudinal study. “The power of the Grant study was that it had 73 years of real behaviour – not just self-reporting – with which to judge its notions of a rewarding life.”

Character Strengths in the Life Domains of Work, Education, Leisure, and Relationships and Their Associations With Flourishing

Lisa Wagner ¹, Lisa Pindeus ¹, Willibald Ruch ¹

Affiliations + expand

PMID: 33967881 PMCID: PMC8096931 DOI: 10.3389/fpsyg.2021.597534

Abstract

A growing body of research demonstrates the relevance of character strengths for flourishing in general, but also for important outcomes across different life domains (e.g., work performance and relationship satisfaction). Studies have also shown that there are differences in the extent to which character strengths are applied, that is, perceived as relevant and shown in behavior in a given context, between work and private life, but they have not considered other life domains. This study aims to close this gap by examining the life domains of work, education, leisure, close personal relationships, and romantic relationships. The present study investigates whether (a) strengths-related behavior across different life domains explains additional variance in flourishing beyond the trait level of each respective character strength and studies (b) differences in the relevance of character strengths and strengths-related behavior across different life domains, and examines (c) their relationships with flourishing. A sample of 203 German-speaking adults (78.8% females; mean age = 29.4 years) completed self-reports assessing flourishing and character strengths. They also indicated which of the five life domains were personally relevant to them (i.e., on average 4.23 life domains) and reported the character strengths' perceived relevance and the frequency of displaying strengths-related behavior for each of these life domains separately. The results demonstrate that (a) strengths-related behavior averaged across all relevant life domains explained unique variance in flourishing above the trait-level of character strengths in some cases (e.g., creativity, kindness, and fairness), (b) different life domains were characterized by specific profiles of character strength-regarding both

Moreover, (c) character strengths and strengths-related behavior in different life domains both showed substantial correlations with flourishing. In some cases, these associations were domain-specific (e.g., displaying love of learning in the context of education was related to higher levels of flourishing). In conclusion, we suggest that examining strengths-related behavior across different life domains represents a worthwhile addition to research on character strengths.

Character Strengths Lead to Satisfactory Educational Outcomes Through Strength Use: A Longitudinal Analysis

Xiaoqing Tang¹, Yumei Li², Wenjie Duan^{3 4}, Wenlong Mu⁵, Xinfeng Cheng⁴

Affiliations + expand

PMID: 31507473 PMCID: PMC6718633 DOI: 10.3389/fpsyg.2019.01829

Abstract

Despite the flourishing of positive education, understanding of whether different character strengths have different predictive effects on academic achievement/well-being and the mechanisms of actions between character strengths are limited. Specifically, this study adopted strength use as a mediator to understand how character strength (assessed by caring, inquisitiveness, and self-control) is associated with students' end-of-year academic achievements and eudaimonic well-being. Survey data from 349 adolescents from three different schools showed that three factors of character strengths have positive correlations with academic achievements and eudaimonic well-being. Regression models indicated that inquisitiveness and self-control predicted academic achievements, while caring, inquisitiveness, and self-control predicted eudaimonic well-being, with the foremost as the strongest predictor. Mediation analyses indicated that (1) strengths use fully mediated the relationship between inquisitiveness, self-control, and academic achievements/eudaimonic well-being, while (2) caring had

These findings provided possible explanations on how character strengths could affect students' academic achievements or eudaimonic well-being and theoretical and empirical evidence for practices that aim to enhance students' academic achievements and positive developments via interventions based on character strengths.

A warm, sunlit living room. A large window is covered with long, flowing curtains in shades of orange, red, and grey. Sunlight streams through the window, casting long shadows on the floor. A white radiator sits beneath the window. To the left, a grey sofa is adorned with several cushions and a light-colored throw blanket. A small potted plant sits on the windowsill. A framed picture hangs on the wall to the left. The floor is covered with a patterned rug. The overall atmosphere is peaceful and inviting.

3) HOURLY PEACFUL MEDITATION

The efficacy of mindfulness apps on symptoms of depression and anxiety: An updated meta-analysis of randomized controlled trials

Jake Linardon ^{a b}  , Mariel Messer ^a, Simon B. Goldberg ^{c d}, Matthew Fuller-Tyszkiewicz ^a

Abstract

Mindfulness apps have become popular tools for addressing symptoms of depression and anxiety. Since the publication of earlier meta-analyses evaluating the efficacy of mindfulness apps for depression and anxiety symptoms, over 20 randomized controlled trials (RCTs) have been conducted. There is a need for an updated meta-analysis that quantifies the effects of mindfulness apps on these symptoms and tests for potential moderators.. Random effects meta-analyses were conducted on 45 RCTs. Small, significant effect sizes were found for symptoms of depression ($N_{comp}=46$, $N=5852$, $g=0.24$, 95% CI=0.17, 0.31, NNT=13.57) and anxiety ($N_{comp}=48$, $N=6082$, $g=0.28$, 95% CI=0.21, 0.35, NNT=11.47) in favour of mindfulness apps over control groups. This effect was not explained by symptom deterioration in participants allocated to control groups. Effects remained stable when restricting analyses to lower risk of bias and larger sample trials. No significant moderators were observed, except trials that offered monetary compensation produced larger effects on depression. Non-significant effects were observed when comparing mindfulness apps to active therapeutic comparisons ($g=-0.15$

Growing evidence indicates that mindfulness apps can acutely reduce symptoms of depression and anxiety, although higher quality studies with longer follow-ups are needed.
